

Dear Hiring Team,

I am applying for the IT Cloud Web Application Platform Engineer position at WEC Business Services LLC. My experience combines software development, production workload migration, integration implementation, and client support. In my role as Manager at DSTax Technologies, I serve as a technical lead and lead developer for a tax-integration platform. This combination of development and operational responsibilities is relevant to your Cloud Platform team's work deploying and maintaining cloud-based applications and services.

At DSTax Technologies, I migrated production workloads from DigitalOcean to AWS and led the transition from Version 1 to Version 2 of the tax-integration platform. I also optimized asynchronous operations to improve performance and throughput. Alongside development, I managed internal projects and client-coordinated work, communicated integration updates, and supported implementations from requirements gathering and setup through troubleshooting and go-live. These responsibilities connect application delivery with the practical support needs of the people using the platform.

Earlier, as a Facilities Management Intern at Komatsu Mining Corp. (Joy Global), I evaluated, selected, and implemented a global mapping platform that provided facility information to employees and customers. I initiated web automations that reduced manual database-maintenance work and managed SharePoint sites and data. I also designed data-input forms to improve accessibility, reduce errors, and support information sharing across departments. That work required translating operational needs into usable technical solutions.

I hold a BBA in Information Technology Management from the University of Wisconsin–Milwaukee. My technical skills include AWS, Docker, NGINX, GitLab CI/CD, Python, and REST APIs. I would bring this background in application development, cloud migration, troubleshooting, and documentation to collaboration with WEC's development and infrastructure teams. Thank you for considering my application.

Sincerely,
Kyle M. Anderson
